

Gas-off Application for Living and Work Space (100g)

- It is recommended that you use the PuroClenz accelerator for optimal results

Areas to be treated must be entirely unoccupied during the application (this includes pets)

1. PuroClenz works best in dark environments, so it is important to either treat at night or simply close your blinds, drapes, etc.
2. Make sure all doors and windows are closed during treatment
3. Fill a 1-2 gallon plastic bucket with approximately 2.5 quarts of water, and place in a central location of the area being treated (if using a PuroClenz Accelerator, it can be attached to the bucket and turned on at this step).
4. Tear open the foil pack, place the PuroClenz tablet into the bucket of water, and exit the area being treated
5. Allow PuroClenz to work for 24 hours
6. **IMPORTANT:** avoid breathing in the vapors when returning to the area. PuroClenz will still be partially active at this point.
7. Upon return, open all windows and doors in order to allow any remaining PuroClenz to dissipate outside. You can dispose of the remaining product in the bucket in any drain or toilet. Drawing fresh air into the treated area using a fan will accelerate the airing out process
8. Your PuroClenz process is now complete!
